SEMINÁRIO DE LÓGICA MATEMÁTICA

Dia 7 de Julho (sexta-feira), às 15:00, sala 6.2.38

A quantitative analysis of a theorem by F.E.Browder guided by the bounded functional interpretation

Pedro Pinto
(Universidade de Lisboa, CMAFCIO)

Abstract:

In [2], Kohlenbach did an analysis of the proof of Browder's theorem (in [1]) via the monotone functional interpretation. I will be following the same outline but guided by the bounded functional interpretation ([3], [4]). Although the bounds obtained are the same, this example provides a first look at how the bounded functional interpretation works in practice.
